

# Passwords

When a scammer cracks your password they can steal your identity, spend your money and wreak havoc on your whole life.

Did you know on average it takes a hacker 2 seconds to crack a password that has 11 characters! Here are some tips to help keep your identity and information secure:

Don't use any personal information (pet's name, kid's birthday, etc.) in your password.

Change your passwords regularly.

Use a password vault app to help organise & manage all your passwords. **TIP** Remember to read reviews of any app you download.

Try using passphrases (12 or more characters) instead of passwords to instantly increase the security of your accounts.
